

Camilo Andrés García Almeida

Junior Developer

PROFILE

Software Development and Artificial Intelligence Technician trained at CampusLands, focused on automation, bots and web development. I build APIs with Java and Spring Boot, automated workflows with n8n and AI assistants in Python and TypeScript. I stand out for leadership, clear communication and teamwork, and I deliver tested, documented projects. In December 2026 I start my professional internship at Globant.

EDUCATION

Software Development and Artificial Intelligence Technician

CampusLands, Floridablanca — Dec 2025 – Nov 2026

High School Diploma

Fundación Colegio UIS — Nov 2025

EXPERIENCE

Formula 1 in Java — Race simulator

Java · Swing · Threads · SQLite

Desktop simulator built in a pair: each driver runs on its own thread, with dynamic weather, fuel consumption, tyre wear, pit stops and race history.

VitalRoute — Real-time medical triage

TypeScript · Node.js · Socket.IO · React · MySQL

Pair project that decides which clinic a patient should go to. I built the server, the real-time communication, the map dashboard and the AI agent that dispatches the emergency.

DeliveryBot — Ordering bot

n8n · JavaScript · Telegram · Google Sheets

Telegram bot for a coffee shop: shows the menu, builds the cart, calculates the total, saves the order and notifies kitchen and customer. A 39-step automation with no manual work.

Tool Rental Platform

Java · Spring Boot · Spring Security · MySQL · Docker

Individual REST API with three user types: date bookings, payments with VAT, returns with late fees and damage reports. Includes 113 automated tests.

SKILLS

- Java
- Python
- TypeScript
- JavaScript
- SQL
- Spring Boot
- n8n

COMPETENCIES

- Leadership
- Communication
- Teamwork
- Fast learner
- Problem solving
- Ownership

PERSONAL DATA

- LinkedIn
- GitHub
- Portfolio
